Inward and outward register for client onboarding requests

Objective:

Build a single standardized Excel workbook that all team members use on a shared basis to log account-opening case data, with fully automated calculation of Right First Time (RFT) status and MIS reporting at CSE, Location, and Vertical/Segment level — no manual computation required.

Required fields (Data Entry sheet):

Reference ID, Request ID, Entry Type, Client Name, PAN No, Account Type, Location, Segment, RM Name, CSE Name, Processor Name, Inward Date, Outward Date, Resubmission Date, Signed Form Received Date, Submitted to MOFSL Date, Account Opening Date, Account Number, Latest Status, Query Count, Query Details, Query Hold Days (cumulative, user-entered), Touch Count, Remarks.

1. Identity & Organisation

Field	Type	Notes
Reference ID	Text	Unique per case; shared across all resubmission/query rows
Request ID	Text	—
Entry Type	Dropdown	New / Resubmission / Discrepancy Resolution / Modification
Client Name	Text	—
PAN No	Text	—
Account Type	Dropdown	Individual / HUF / Corporate / NRI / Minor
Channel (NEW)	Dropdown	Physical / Digital — determines which Stage 2 path applies
Location	Dropdown	—
Segment	Dropdown	Retail / HNI / Ultra HNI / Institutional / Corporate
RM Name	Text	—
CSE Name	Text	—
Processor Name	Text	Operations executive handling the case
Action By / Current Owner (NEW)	Dropdown	Operations / CSE / MOFSL

2. Process/Activity Stages:

1. Stage 1 – CSE sends request to Operations for filling up application form (Physical or digital)
    - Operations make entry in the tracker
    - Review the request if all required information being provided
    - If any required information is missing, Operations raised the query to CSE

- Query to capture in the tracker and date of submission to CSE
- Date of re-submission by CSE to capture

Field	Type	Notes
Inward Date	Date	Date Operations receives the request from CSE (redefined start point)
Stage 1 Query Raised Date (NEW)	Date	Operations to CSE, missing information
Stage 1 Query Details (NEW)	Text	—
Stage 1 Resubmission Date (NEW)	Date	CSE resubmits missing information to Operations
Status		Query raised to CSE

2. Stage 2 – Filling of Application form and sending it to CSE for onward submission to client for signature
    - Operations fill up the application form and submit it to CSE
    - Status - Submission of physical form to CSE with submission date to capture
    - Status - Submission of Digital form to Client with submission date to capture

Field	Type	Notes
Form Prepared Date (NEW)	Date	—
Physical Form Submitted to CSE Date (NEW)	Date	Applicable when Channel = Physical
Digital Form Sent to Client Date (NEW)	Date	Applicable when Channel = Digital
Status		Form submitted to Client for signing

3. Stage 3 – Receipt of duly signed form from CSE
    - Operations review the application form along with documents provided by CSE
    - Operations raised the discrepancy if any to CSE for rectification
    - Date of receipt of form and discrepancy types to capture
    - Date of sending discrepancy to capture
    - Status – Discrepancy raised to CSE
    - Status – If the form is returned to CSE, date of form returned to capture with status for returned
    - Stage 3 – Receipt of duly signed form from CSE

Field	Type	Notes
Signed Form Received Date	Date	From CSE
Discrepancy Raised Date (NEW)	Date	Operations to CSE
Discrepancy Type (NEW)	Dropdown	Document Missing / Signature Mismatch / Incomplete Details / Other
Form Returned to CSE Date (NEW)	Date	If form physically returned rather than just flagged
Status		Discrepancy raised to CSE

4. Stage 4 – Resubmission of form or resolution of discrepancy
    - Operations review the resubmitted case that discrepancies raised are resolved
    - Date of receipt of query resolution by CSE to capture
    - Operations review the form resubmitted are being reviewed by Operations
    - Date of receipt of form from CSE to capture
    - Status of the application to capture – if the form found in order – Form sent to MOFSL for account opening, date of submission to MOFSL to capture

Field	Type	Notes
Discrepancy Resolution Received Date (NEW)	Date	From CSE
Resubmitted Form Received Date (NEW)	Date	From CSE, distinct from Stage 1 resubmission
Stage 4 Review Outcome (NEW)	Dropdown	Found in Order / Still Pending
Status		Query resolution status

5. Stage 5 – Submission of form to MOFSL for account opening
    - Date of submission to MOFSL to capture with status submitted to MOFSL
    - If any discrepancy raised by MOFSL, capture the date of query raised by MOFSL and type of query with status
    - In case of resolution of queries, date of query resolution to capture and status to capture

Field	Type	Notes
Submitted to MOFSL Date	Date	—
MOFSL Query Raised Date (NEW)	Date	—
MOFSL Query Type (NEW)	Text	—

Field	Type	Notes
MOFSL Query Resolved Date (NEW)	Date	—
Status		For submitted to MOFSL

6. Stage 6 – Account Opened and communication
    - MOFSL team provide the details of accounts opened, tracker to capture the account no date of account opening and update the status as Account Opened

Field	Type	Notes
Account Number	Text	Provided by MOFSL
Account Opening Date	Date	—
Status		Account Opened

Stage	Name	Description
Stage 1	CSE Request to Operations	CSE sends a request to Operations to fill the application form (physical or digital). Operations logs the entry, reviews completeness, and raises a query to CSE if information is missing.
Stage 2	Form Preparation & Submission	Operations fills the application form and sends it onward — physical form to CSE, or digital form directly to the client for signature.
Stage 3	Receipt of Signed Form	Operations receives the signed form along with supporting documents from CSE, reviews it, and raises a discrepancy to CSE if issues are found — or returns the form.
Stage 4	Resubmission / Discrepancy Resolution	Operations reviews the resubmitted form or resolved discrepancy. If found in order, the case proceeds to MOFSL submission.
Stage 5	Submission to MOFSL	Form is submitted to MOFSL for account opening. If MOFSL raises a query, it is tracked through to resolution.
Stage 6	Account Opened & Communication	MOFSL confirms account opening; the account number and opening date are logged and the case is closed.

3. Auto-Calculated Fields (system-locked)

Field	Logic
Original Inward Date	Earliest Inward Date across all rows sharing the Reference ID
Resubmission Count	Count of rows sharing the Reference ID, minus 1
Current Stage	Derived from which stage-fields are populated; manually overridable
RFT Status	NRFT if Stage 1 Query OR Stage 3 Discrepancy/Return OR Stage 5 MOFSL Query occurred at any row for that Reference ID; else RFT
Stage 1–6 TAT	Working days elapsed within each individual stage
Gross TAT	Original Inward Date → Account Opening Date (or today if open)
Net TAT	Gross TAT minus total query/discrepancy hold days
Current Aging	Original Inward Date → Today, for open cases
SLA Breach (Overall + Stage-wise)	Flagged if TAT exceeds configurable threshold (default 7 working days)

4. Points to consider –

- The system auto-derives “Original Inward Date” for each Reference ID using the earliest Inward Date across all its rows — TAT always counts from first receipt, never reset by any later event.
- “Resubmission Count” auto-counts how many rows exist for a given Reference ID, minus 1.

5. Right First Time (RFT) Definition

- RFT is measured end-to-end across ALL six stages — not just one checkpoint.
- A case is marked NRFT (Not Right First Time) if ANY of the following occurred at any stage:
    1. Stage 1 — Query raised to CSE for missing information
    2. Stage 3 — Discrepancy raised to CSE on the signed form / documents, OR form returned to CSE
    3. Stage 5 — Query raised by MOFSL

A case with zero occurrences of the above across all stages is RFT. This is a stricter, more accurate definition than tracking a single query counter, because it attributes rework to its true source (CSE-side vs. MOFSL-side) for fair MIS reporting.

6. Status Master List

This is the single “Latest Status” dropdown list to be used in the tracker. Each status is mapped to its stage for filtering and MIS purposes.

#	Stage	Status
1	Stage 1	Request Received from CSE
2	Stage 1	Under Review by Operations
3	Stage 1	Query Raised to CSE — Missing Information
4	Stage 1	Resubmitted by CSE
5	Stage 2	Application Form Under Preparation
6	Stage 2	Physical Form Submitted to CSE
7	Stage 2	Digital Form Sent to Client
8	Stage 3	Signed Form Received from CSE
9	Stage 3	Under Review — Signed Form
10	Stage 3	Discrepancy Raised to CSE
11	Stage 3	Form Returned to CSE
12	Stage 4	Discrepancy Resolution Received
13	Stage 4	Resubmitted Form Received — Under Review
14	Stage 4	Form Found in Order — Ready for MOFSL Submission
15	Stage 5	Submitted to MOFSL
16	Stage 5	Query Raised by MOFSL
17	Stage 5	Query Resolved — Resubmitted to MOFSL
18	Stage 6	Account Opened
19	Stage 6	Communication Sent — Case Closed
20	Exception	On Hold
21	Exception	Rejected

#	Stage	Status
22	Exception	Cancelled by Client

7. MIS Reporting Requirement (Unchanged from Original Scope)

- CSE-level MIS: Total cases, RFT / NRFT, RFT %, average TAT, SLA breaches, query/discrepancy attribution.
- Location-level MIS: Same metrics rolled up by location.
- Vertical / Segment-level MIS: Same metrics rolled up by segment.
- Stage Pipeline view: Case count and average aging at each of the 6 stages, to identify bottlenecks.
- Overall Summary Dashboard: Organization-wide KPIs for management reporting.
